# THE BEST IN COTTON SEED

1930

MISSISSIPPI GROWN

## HUMPHREY-COKER SEED COMPANY

Hartsville, S. C.

Greenwood, Miss.

S. PRESSLY COKER, *Manager*

# "HUMCO" DELTA—8

## A SUPERIOR STRAIN OF DELTA COTTON

This cotton is an EARLY, OPEN, FRUITING BRANCH TYPE, FRUITS RAPIDLY and carries STAPLE OF EXCELLENT BODY and SPINNING QUALITY. Its record for four years shows:

**Staple**—1 5/16" full to 1 3/8".

**Per Cent Lint**—34.5.

**Boll Size**—65 per pound seed cotton.

**4. IT IS EARLY:** Its blooming record shows it 4,560 blooms per acre ahead of its parent strain to August 1st, and 12,028 blooms per acre ahead of our earliest South Carolina Delta—36, Strain—2, up to Aug. 1st, 1929.

### QUESTION:

**What Can I Expect If I Plant It?**

1. Heavy production.
2. Full 1 1/4" to 1 5/16" staple.
3. A profitable crop and satisfaction.

**No Strain of the Deltatype Webber Variety Superior to Our Delta—8.**

## It's up to the Top in Yielding Capacity

UNIFORM TYPE

# "HUMCO" DELFOS—6102-54

STRAIN—2

A COTTON WORTH KNOWING

ITS RECORD, 1928, UNEXCELLED  
IN SOUTH

CHARACTERS

1. **GENERAL NOTES.**—Delfos—54 Strain—2. A very striking selection from our 1924 Breeding Plot, where it was outstanding in **LIGHT FOLIAGE, UNIFORMITY OF TYPE, EARLINESS** and **HIGH YIELD.**
2. **YIELD.—THIS COTTON A WINNER.** It started off its record with a yield of 2,160 lbs. seed cotton per acre in 1924, all of 272 lbs. per acre more than the next highest yielding selection. Since then it has been a consistent high yielder.
3. **EARLINESS.—IT IS OUTSTANDINGLY GOOD.** As a selection in 1924 it stood first in bloom count to August 1st, being 10,880 blooms ahead of the next best. In our 1929 bloom counts it stands 24,544 blooms per acre ahead of Delfos—6102-38 to August 1st.

**The earliest Delfos cotton we have offered**

## Can You Beat It?

**Delfos—54 Cotton** won first prize in the Louisiana State five-acre cotton contest for 1928. Mr. A. P. Surles, Lake Providence, La., the winner, made 6,110 pounds lint on five acres. The highest yield of any five-acre contest plot in South.

# "HUMCO" DELFOS—6102-38

## STRAIN—1

### THIS STRAIN HAS MADE AN ENVIABLE RECORD

It won more prizes in the Louisiana State five acre Cotton Contest for 1928 than any other variety grown (four out of first twelve prizes).

Every grower has been enthusiastic about its desirable type, its high yield, and the better quality of its staple.

### IT SELLS FOR MORE

In staple length and quality it has been most outstanding and much praised by the cotton buyers. (See Letter on Other Side from W. W. REDDETT, Money, Miss.)

### IT EXCELS DELFOS—6102

1. **In Yield.**—Its average yield for three years has been 1,865 lbs. of seed cotton per acre. 247 lbs. of seed cotton per acre better than Delfos—6102.
2. **In Value.**—Better by \$22.50 per acre than the 6102 in 1924.
3. **In Staple.**—1  $\frac{3}{16}$ " full to 1  $\frac{1}{4}$ ".
4. **In Earliness.**—Our bloom records show an increase of 26,846 blooms per acre more to August 1st than Delfos—6102.
5. **In Per Cent Lint.**—Average for five years, 35%.

Our crop this seed the finest we have ever had. We have 1500 acres growing at Schlater, Miss., and a conservative estimate made on September 1, 1929, places the yield at 1500 bales or better.

### SEED OFFERED AT BARGAIN PRICE

A chance to buy the finest seed cheap.

**See Price List for Prices**

# "HUMCO" DELFOS—6102-38

## STRAIN—2

### A BRAND NEW OFFERING

#### Outstanding in Character and Body of Lint

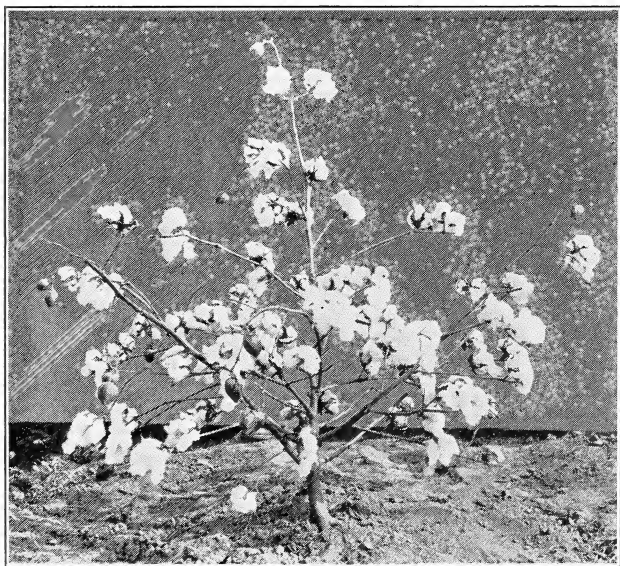

It's just out this year for the first time. Just four years from its parent plant.

It's **very uniform**. It carries all the excellent characteristics and qualities of Delfos 6102-38, Strain—1, given on opposite page, and **excels it in Staple, Body and Character**.

Only limited quantity for sale. **Order early** if you want this seed.

### A BUYER'S OPINION

**A Buyer** phoned us last season to say this cotton had **Best Body and Character** of any Delfos cotton he had ever seen.

A PLANT DELFOS—6102-38

# *What Others Think*

A FEW TESTS

Money, Miss., February 15, 1927.

Humphrey-Coker Seed Co.,

Greenwood, Miss.

Gentlemen:

In regard to the Delfos 6102-38 grown by me in 1926 crop, I recommend it unhesitatingly as the very best Delfos Cotton I have ever seen. My reason for this is as follows:

It produced more cotton per acre than the 6102 which I have grown for two years, and the average turnout at the gin was up to 35%.

The staple, pulled by the Factor Department of the Association, ran mostly 9's, with a few 10's and some 8's, the average being 9's. This cotton was classed as shy quarters by the buyer who took it from the Association. It is said by these men to be of excellent character and body.

I have in my fields at present some places from which I am picking a bale per acre. In these places the wastage is very low, showing that it sticks better than its parent strain, Delfos 6102.

I have received an increase over the prices on this market paid for ordinary Delfos cotton of from four to six cents per pound on cotton picked prior to December 1st.

Yours very truly,

W. W. REDDETT.

Lake Providence, La., August 20, 1929.

Humphrey-Coker Seed Co.,

Hartsville, S. C.

Dear Sirs:

Your Delfos 54 and 38 are certainly good varieties of cotton. From a 1200 acre planting last year, we got 1005 bales cotton. It is easily picked, lintage good, and staple from  $1 \frac{3}{16}$ " to  $1 \frac{1}{4}$ ". We were so well pleased with this return that we planted our entire 1400 acres with your Delfos 54, Strain 2 for our 1929 crop. It looks at this date as if it will yield better than three-quarters of bale per acre.

We have for the past three years bought all our planting seed direct from you, and the results have been most satisfactory.

Yours very truly, W. T. MITCHNER.

## IMONIALS

---

Mansford Plantation,

Talla Bena, La., August 7th, 1929.

Humphrey-Coker Seed Company,  
Hartsville, S. C.

Gentlemen:

We purchased a car of your "Delfos 54," Strain 2 Cotton Seed last fall and wish to state that we did not have to plant an acre over and have a very good stand on the entire planting, and the cotton is now made, some of it with the top crop by the first of August.

Would be glad to answer inquiries regarding the merit of your 54 Strain 2 seed, as I consider it to be the best Cotton that I have ever planted under Boll Weevil and other adverse conditions.

Yours truly,

D. A. WHITFIELD,  
Manager.

Tallulah, La., August 19, 1929.

Humphrey-Coker Seed Co.,  
Hartsville, S. C.

Dear Sirs:

Your Delfos 38 and 54 have proven most satisfactory, both as to yield, staple and early maturity.

In 1927 after the flood, sixty acres were planted to Delfos 38, June 12 to 14th. We gathered 62 bales of cotton.

In 1928, one tenant gathered 28 bales from 15 acres planted to Delfos 54. This year, we have 800 acres planted to your Delfos 54 and a small amount to Delta 8.

The staple of the Delfos 54 has been  $1 \frac{3}{16}$ " to  $1 \frac{1}{4}$ ". Under Boll Weevil conditions, Delfos 38 and 54 have proven ideal varieties. We need early maturity with good lintage and staple. These cottons satisfy these requirements. I ginned Saturday the first bale of the new crop, 1640 lbs. seed cotton produced 510 lb. bale.

Yours very truly, W. G. JOHNSON.

# OUR GUARANTEE AND RESPONSIBILITY

Our Pedigreed Seeds represent the increase from individual plants of proven quality. Bred by the Plant-to-Row method, tested over a series of years. Increased for sale to the public. We guarantee them true to name.

**EXAMINE OUR SEEDS** when you receive them and test them in any way you see fit. If for any reason they are not satisfactory, they may be returned to us within ten days after they are received, in the original package, **AT OUR EXPENSE. WE WILL REFUND ENTIRE PURCHASE PRICE.** We waive all responsibility for seeds which have been in a customer's hands more than ten days, as the vitality of any seed may be lessened or killed after leaving our warehouse, by subjection to moisture, heat, chemicals or other conditions. Under no circumstances will we be responsible for the germination of seed after they are planted, whether within ten days or not, as there are many reasons for imperfect germination of planted seeds other than their vitality. If the purchaser does not accept seed under this condition, they are to be returned at once.

## OUR TERMS

**We Sell for Cash.** Send the money with your order. To persons having proper credit rating we will make shipment by freight, sight draft with bill of lading attached, or by express C. O. D., but others must send cash with order. All our prices are F. O. B. Hartsville, S. C., or Greenwood, Miss. Remittance may be made by check, money order, cash or stamps. We are not responsible for your order until it reaches us.

## HUMPHREY-COKER SEED COMPANY

**Hartsville, S. C.      Greenwood, Miss.**

**S. PRESSLY COKER, *Manager***

- (3) **Because they are tested for germination.** Only such seed as show up to a high standard are sold as planting seed. Strong vitality to insure a quick start off is reflected in highest yield.
- (4) **Because they are acclimated to your conditions of soil and climate.** They produce better than seed brought in from a different section of the country.
- (5) **THE PROOF THAT THEY ARE HIGHLY PRODUCTIVE:**

Lake Providence, La., August 28, 1929.

Humphrey-Coker Seed Co.,  
Hartsville, S. C.

Dear Sirs:

We have our entire property planted in your Delfos 38 and 54. We won first prize in Louisiana State five-acre Cotton Contest, 1928. We got 6,110 pounds (11 bales) of lint from the five acres, using 200 pounds Soda Nitrate per acre.

Both are wonderful cottons. We also have a wonderful crop this year. Our crop shows the largest bolls we have ever seen.

Sincerely yours,                      A. P. SURLES.

A BRAND NEW OFFERING

Outstanding in Character and Body of Lint

It's just out this year for the first time. Just four years from its parent plant.  
 It's very uniform. It carries all the excellent characteristics and qualities of Delfos 6102-38, Strain—1, given on opposite page, and excels it in Staple, Body and Character.  
 Only limited quantity for sale. Order early if you want this seed.

### A BUYER'S OPINION

A Buyer phoned us last season to say this cotton had Best Body and Character of any Delfos cotton he had ever seen.

A PLANT DELFOS—6102-38

# **4** *reasons why you should buy* **"HUMCO"** Pedigreed Cotton Seed

## **1** They are Highly Productive

- (1) Because they are bred right. Every strain of seed we put out must be uniform, desirable in type, a high yielder and high in money value per acre.
- (2) Because they are graded properly. All the light, immature, and faulty seed are removed, insuring better quality, better stands and highest yielding powers. (See Over)

## **2** They are Absolutely Pure

We grow only our finest Pedigreed Stocks under closest personal supervision. Crops are carefully inspected and rogued to keep seed up to highest standard. No seed other than ours handled at ginnery and closest supervision given to insure purity. Our seed cleaned, sacked and tagged at the gin. At every stage they are handled to insure purity and finest quality.

## **3** They are Guaranteed Right

Our seed are grown and handled under the strictest supervision. Duplicate tests for germination and vitality are carefully made before they are shipped. We know their quality and we GUARANTEE THEM TO BE PURE as to variety and HIGH IN GERMINATION.  
(See our guarantee elsewhere in this circular)

## **4** They Return Highest Value

- (1) In Experiment Station Tests throughout the South, HUMCO Seeds have shown up with the best. (Look up these records.)
- (2) In the hands of the Farmers, to whom we have sold them, they are giving finest results. (See testimonials elsewhere in this circular.)  
See 1928 Contest Records (over)
